

# Smart Textile Solutions

The interface between textiles and electronics has been a primary research area at ADRESYS for years. We deal with sensors, actuators and conductors suitable for series production, with washing stability and contacting methods, all at affordable production costs.

When it comes to Smart Textile Solutions, unique solutions for individual challenges are our claim and our goal: for ourselves and for others, because we like to share our knowledge.

## Our expertise

- CONTACTING METHODS for different components of a smart textile system
- CONNECTION between an electronic data processing unit with smart textiles using a connectionplate developed by us
- PROCESS DEVELOPMENT in the smart textile area with the aim of simplified mass production
- QUALITY ASSURANCE using a customizable Smart Textile Tester.

## Let's make your textile smarter!

Connectionplate

Get to know our taping methods.

## Our offers

- Our Smart Textile Solutions Box: Develop your very own connection between the removable data processing unit and your textile using our special components.
